PUBLIC DISCLOSURE: This specimen reproduces the layout and field density of an order-specific inspection document. All certificate, heat, coil, bundle, quantity and numerical test data shown here are illustrative and do not describe a customer shipment.

An issued EN 10204 3.1 document reports actual specific inspection results for the delivered material against the single ordered product standard and edition. Traceability connects PO -> heat / cast -> production lot -> product marks -> packing list -> shipment lot.

Third-party inspection is provided only when agreed in the PO or inspection plan. The issued document is validated by the manufacturer's authorized inspection representative independent of the manufacturing department.
